SkillGauge AI – Interview Assessment Report

Email: lingeshwar17@gmail.com

1. What is the standard decorator used in Python Flask to associate a URL route with a function?
A) @app.route()
B) @flask.path()
C) @app.url_map()
D) @app.get_request()

Student Answer: A
Correct Answer: A
Result: Correct ■
Marks: 1 / 1

2. In the C language, which storage class specifier is used to declare variables that are allocated memory only when the function is called and deallocated upon return?
A) static
B) extern
C) register
D) auto

Student Answer: A
Correct Answer: D
Result: Wrong ■
Marks: 0 / 1

3. Which SQL clause is specifically used to filter the results of a GROUP BY aggregate function?
A) WHERE
B) FILTER
C) HAVING
D) SELECT_IF

Student Answer: B
Correct Answer: C
Result: Wrong ■
Marks: 0 / 1

4. Which CSS property is used to control the visual stacking order of overlapping elements on a web page?
A) position
B) z-index
C) display
D) order

Student Answer: B
Correct Answer: B
Result: Correct ■
Marks: 1 / 1

5. In the standard Machine Learning pipeline, what critical step usually follows 'Data Preprocessing' and involves transforming raw data into meaningful input features for the model?
A) Model Deployment
B) Feature Engineering
C) Hyperparameter Tuning
D) Data Visualization

Student Answer: B

Correct Answer: B
Result: Correct ■
Marks: 1 / 1

6. If a highly imbalanced binary classification model yields many False Negatives, which evaluation metric should you prioritize to ensure those negative cases are correctly identified?
A) Precision
B) Accuracy
C) Recall (Sensitivity)
D) Specificity

Student Answer: A
Correct Answer: C
Result: Wrong ■
Marks: 0 / 1

7. Which Git command is used to integrate changes from one branch into the current branch?
A) git pull
B) git fetch
C) git rebase
D) git merge

Student Answer: A
Correct Answer: D
Result: Wrong ■
Marks: 0 / 1

8. Dataiku DSS is primarily designed to provide an environment for which of the following activities?
A) Writing low-level kernel drivers
B) Unified platform for data preparation, modeling, and operationalization
C) Real-time stock market data visualization only
D) Pure infrastructure monitoring

Student Answer: D
Correct Answer: B
Result: Wrong ■
Marks: 0 / 1

9. BigQuery utilizes what type of processing and storage architecture to achieve high performance on large analytical datasets?
A) Row-based transaction tables
B) Document-based NoSQL storage
C) Columnar storage and processing
D) In-memory graph database

Student Answer: B
Correct Answer: C
Result: Wrong ■
Marks: 0 / 1

10. Which method is generally recommended for handling missing numerical data if you want to estimate the value based on the trend of surrounding points (especially in time series)?
A) Dropping the entire feature column
B) Mode imputation
C) Linear or Spline Interpolation
D) Setting the value to zero

Student Answer: B
Correct Answer: C
Result: Wrong ■
Marks: 0 / 1

11. Which algorithm is commonly employed for pattern detection in market basket analysis to discover relationships between items?
A) K-Means Clustering
B) Apriori Algorithm
C) Principal Component Analysis (PCA)
D) Support Vector Machine (SVM)

Student Answer: A
Correct Answer: B
Result: Wrong ■
Marks: 0 / 1

12. The Xception model architecture is characterized by the extensive use of what specific type of convolutional layer, replacing standard convolution?
A) Dilated Convolutions
B) Transpose Convolutions
C) Depthwise Separable Convolutions
D) 1x1 Convolutions

Student Answer: A
Correct Answer: C
Result: Wrong ■
Marks: 0 / 1

13. In Python, what is the purpose of the 'pass' statement?
A) To skip the current iteration in a loop
B) To define an empty block of code (syntactic placeholder)
C) To exit a function early
D) To handle exceptions gracefully

Student Answer: C
Correct Answer: B
Result: Wrong ■
Marks: 0 / 1

14. MongoDB stores data records as BSON documents. What does BSON stand for?
A) Binary Structural Object Notation
B) Binary JSON
C) Basic Serialization of Objects and Nodes
D) Big Schema Object Notation

Student Answer: C
Correct Answer: B
Result: Wrong ■
Marks: 0 / 1

15. What is the primary risk associated with 'Model Drift' in an AI-Powered System?
A) Increased cloud hosting costs
B) The model's predictions becoming inaccurate over time due to data distribution changes
C) Loss of source code integrity
D) Failure to load data into the production environment

Student Answer: A
Correct Answer: B
Result: Wrong ■
Marks: 0 / 1

16. Which key feature of VS Code allows a developer to treat a remote server, container, or WSL environment as if it were a local workspace?
A) IntelliSense
B) Live Share
C) Remote Development Extensions
D) GitLens

Student Answer: A
Correct Answer: C
Result: Wrong ■
Marks: 0 / 1

17. When visualizing data, which TIBCO product is commonly used for interactive data exploration and dashboard creation, specializing in Business Intelligence?
A) Tableau
B) Power BI
C) Spotfire
D) Grafana

Student Answer: C
Correct Answer: C
Result: Correct ■
Marks: 1 / 1

18. In the context of supervised learning, what phenomenon occurs when a model learns the training data and noise too well, resulting in poor performance on unseen data?
A) Underfitting
B) Generalization
C) Overfitting
D) Bias-Variance Trade-off

Student Answer: D
Correct Answer: C
Result: Wrong ■
Marks: 0 / 1

19. Which HTML tag is used to embed CSS directly within the HTML document (instead of linking an external file)?
A) <css>
B) <style>
C) <link>
D) <script>

Student Answer: D
Correct Answer: B
Result: Wrong ■
Marks: 0 / 1

20. The F1 Score is the harmonic mean of which two classification metrics?
A) Accuracy and Specificity
B) Recall and Sensitivity
C) Precision and Recall
D) True Positives and True Negatives

Student Answer: A
Correct Answer: C
Result: Wrong ■
Marks: 0 / 1

21. A core concept in Artificial Intelligence where a pre-trained model on a large dataset (Task A) is adapted and fine-tuned for a related, but different, task (Task B) is known as:
A) Reinforcement Learning
B) Transfer Learning
C) Adversarial Learning
D) Feature Selection

Student Answer: B
Correct Answer: B
Result: Correct ■
Marks: 1 / 1

22. In BigQuery, what is the primary factor that dictates the cost for running query jobs (when using on-demand pricing)?
A) The duration the query takes to run
B) The number of CPU cores utilized
C) The volume of data scanned by the query
D) The number of rows returned

Student Answer: B
Correct Answer: C
Result: Wrong ■
Marks: 0 / 1

23. What is the key difference between using `margin` and `padding` in CSS layout?
A) `Margin` creates space inside the element's border; `padding` creates space outside.
B) `Padding` creates space inside the element's border; `margin` creates space outside.
C) They are synonymous and interchangeable.
D) `Margin` only works horizontally; `padding` only works vertically.

Student Answer: B
Correct Answer: B
Result: Correct ■
Marks: 1 / 1

24. When setting up a Python Flask application, which import is necessary to use the Jinja templating engine to render HTML pages?
A) from flask import request
B) from flask import redirect
C) from flask import jsonify
D) from flask import render_template

Student Answer: C
Correct Answer: D
Result: Wrong ■
Marks: 0 / 1

25. In data cleaning, the Interquartile Range (IQR) method is primarily used to robustly identify what characteristic of a dataset?
A) Multicollinearity
B) Homoscedasticity
C) Potential Outliers
D) Skewness

Student Answer: C
Correct Answer: C
Result: Correct ■
Marks: 1 / 1

FINAL SCORE: 7 / 25
