Report Date: 2026-02-15 16:49:19

1. In Python, which of the following is a characteristic of a 'tuple' compared to a 'list'?
A) Tuples are mutable
B) Tuples are immutable
C) Tuples are slower to iterate through ✗
D) Tuples use more memory than lists

2. Which Object-Oriented Programming (OOP) principle is primarily achieved through the use of interfaces and abstract classes to allow a single interface to represent different underlying forms?
A) Encapsulation
B) Inheritance
C) Polymorphism ✓
D) Abstraction

3. In Design Patterns, which pattern is used to ensure that a class has only one instance and provides a global point of access to it?
A) Factory Method
B) Observer
C) Singleton ✓
D) Strategy

4. In MySQL, what does the 'I' in the ACID properties of a database transaction stand for?
A) Integrity
B) Independence
C) Isolation ✓
D) Iterability

5. MongoDB is categorized as which type of database?
A) Relational (RDBMS)
B) Document-oriented
C) Key-value store
D) Graph database ✗

6. In Git, which command allows you to integrate changes from one branch into another by moving the entire branch to begin on the tip of the master branch?
A) git merge
B) git fetch
C) git rebase ✓
D) git checkout

7. In the Django framework, what is the purpose of 'Middleware'?
A) To define the database schema
B) To handle URL routing
C) A framework of hooks into Django's request/reponse processing ✓
D) To render HTML templates

8. In ReactJS, which hook would you use to perform side effects like data fetching or DOM manipulation?

A) useState
B) useContext
C) useEffect ✓
D) useReducer

9. Which component in Java is responsible for converting Bytecode into machine-specific code during execution?
A) JDK
B) JRE
C) JVM ✓
D) Javac

10. In C programming, what is the size of a pointer variable on a 64-bit system?
A) 2 bytes
B) 4 bytes ✗
C) 8 bytes
D) 16 bytes

11. In Microsoft Azure, which service is primarily used for providing serverless compute functions?
A) Azure Virtual Machines
B) Azure Functions
C) Azure Cosmos DB
D) Azure SQL Database ✗

12. In Machine Learning, what is the phenomenon where a model performs well on training data but poorly on unseen test data?
A) Underfitting
B) Overfitting ✓
C) Bias-Variance Tradeoff
D) Feature Scaling

13. In an ML Pipeline, what is the primary goal of 'StandardScaler'?
A) To handle missing values ✗
B) To encode categorical variables
C) To transform data to have a mean of 0 and standard deviation of 1
D) To perform dimensionality reduction

14. Which metric is calculated as the harmonic mean of Precision and Recall?
A) Accuracy ✗
B) F1-Score
C) ROC-AUC
D) Mean Squared Error

15. In LLM Fine-Tuning, what does 'LoRA' stand for?
A) Low-Rank Adaptation ✓
B) Logical Response Algorithm
C) Long-Range Attention
D) Linear Optimization for Robust AI

16. In Computer Vision, what is the main purpose of a 'Pooling' layer in a Convolutional Neural Network (CNN)?
A) To increase the number of parameters ✗
B) To introduce non-linearity

C) To reduce the spatial dimensions of the input volume
D) To normalize the input pixel values

17. In Tableau, what is the difference between a 'Dimension' and a 'Measure'?
A) Dimensions are quantitative; Measures are qualitative ✗
B) Dimensions are categorical; Measures are numerical data that can be aggregated
C) Dimensions are always blue; Measures are always red
D) There is no difference

18. In Flask, which decorator is used to trigger a function when a specific URL is visited?
A) @app.route() ✓
B) @app.link()
C) @app.url()
D) @app.api()

19. Which algorithm uses the 'Kernel Trick' to transform data into a higher-dimensional space to find a linear separator?
A) Random Forest ✗
B) Support Vector Machine (SVM)
C) K-Nearest Neighbors
D) Decision Trees

20. In UI/UX design, what does 'Affordance' refer to?
A) The cost of the design software ✗
B) The visual cues that suggest how an object should be used
C) The accessibility of the website for disabled users
D) The speed at which a page loads

21. Which of the following HTTP methods is considered 'Idempotent' in a RESTful API?
A) POST ✗
B) GET
C) PATCH
D) All of the above

22. What is the primary security benefit of using 'Prepared Statements' in database programming?
A) Faster execution of queries ✗
B) Prevention of SQL Injection attacks
C) Encryption of data at rest
D) Automatic database backups

23. In Prompt Engineering, what is 'Few-shot prompting'?
A) Providing no examples to the model ✗
B) Providing a few examples of the task in the prompt
C) Fine-tuning the model weights with a small dataset
D) Limiting the output length of the model

24. In Quantum Computing, the ability of a quantum bit to exist in multiple states simultaneously is called:
A) Entanglement ✗
B) Superposition
C) Decoherence
D) Interference

25. What is 'Data Distillation' in the context of Large Language Models?
A) Compressing a large model into a smaller 'student' model ✓
B) Removing duplicate data from the training set
C) Converting unstructured data to CSV
D) Increasing the number of parameters in a model

FINAL SCORE: 11/25
Percentage: 44.0%
