Report Date: 2026-02-15 16:54:55

1. In Python's Object-Oriented Programming, what is the primary purpose of the 'super()' function?
A) To create a new instance of a class ✗
B) To call a method from the parent class
C) To terminate a loop in a child class
D) To check if an object is an instance of a class

2. Which Design Pattern is used to ensure that a class has only one instance and provides a global point of access to it?
A) Factory Pattern ✗
B) Observer Pattern
C) Singleton Pattern
D) Strategy Pattern

3. In MySQL, which of the following commands is used to remove all records from a table without deleting the table structure itself?
A) DELETE TABLE ✗
B) DROP TABLE
C) TRUNCATE TABLE
D) REMOVE TABLE

4. MongoDB stores data in which format?
A) SQL Rows ✗
B) BSON (Binary JSON)
C) XML
D) CSV

5. In Git, what is the difference between 'git fetch' and 'git pull'?
A) Fetch downloads changes but doesn't merge; pull downloads and merges ✓
B) Pull downloads changes but doesn't merge; fetch downloads and merges
C) There is no difference
D) Fetch is used for local branches only

6. In Django, which component is responsible for handling the logic of a request and returning a response?
A) Model ✗
B) Template
C) View
D) Middleware

7. In ReactJS, what is the purpose of the 'useEffect' hook?
A) To manage local component state ✗
B) To handle side effects like data fetching or DOM updates
C) To optimize rendering speed only
D) To create context providers

8. Which of the following is a key feature of Java that allows it to run on any platform?
A) Pointer Arithmetic ✗

B) Garbage Collection
C) Java Virtual Machine (JVM)
D) Multiple Inheritance

9. In C programming, what does the 'malloc' function return if the memory allocation fails?
A) 0 ✗
B) -1
C) NULL
D) Void pointer to garbage

10. In Microsoft Azure, which service is primarily used for hosting serverless functions?
A) Azure Virtual Machines ✗
B) Azure Functions
C) Azure SQL Database
D) Azure Blob Storage

11. In Machine Learning, what is the primary goal of 'Model Distillation'?
A) To increase the complexity of a model ✗
B) To transfer knowledge from a large 'teacher' model to a smaller 'student' model
C) To remove outliers from a dataset
D) To automate hyperparameter tuning

12. Which evaluation metric is most appropriate for a classification problem with highly imbalanced classes?
A) Accuracy ✗
B) Mean Squared Error
C) F1-Score
D) R-Squared

13. In Deep Learning, what is the role of a 'Pooling Layer' in a Convolutional Neural Network (CNN)?
A) To increase the number of features ✗
B) To reduce the spatial dimensions and computational load
C) To act as an activation function
D) To normalize the input data

14. Yolov8 is primarily used for which of the following tasks?
A) Natural Language Translation ✗
B) Real-time Object Detection
C) Audio Signal Processing
D) Time Series Forecasting

15. In RESTful APIs, which HTTP method is typically used to update an existing resource by replacing it entirely?
A) POST ✗
B) PATCH
C) PUT
D) GET

16. What is the primary function of a Support Vector Machine (SVM)?
A) To group data into clusters based on distance ✗
B) To find the hyperplane that maximizes the margin between classes
C) To build an ensemble of decision trees
D) To perform gradient descent on a loss function

17. In Tableau, what is the main difference between 'Dimensions' and 'Measures'?
A) Dimensions are quantitative; Measures are qualitative ✗
B) Dimensions are categorical; Measures are numerical data that can be aggregated
C) Measures are used for filters; Dimensions for colors
D) There is no functional difference

18. What does 'Data Cleaning' typically involve in an ML Pipeline?
A) Adding more features to the model ✗
B) Handling missing values and removing noise
C) Deploying the model to production
D) Splitting data into 80/20 ratio

19. In Security Programming, what is a 'Salt' used for in the context of password storage?
A) To encrypt the database ✗
B) To add a random string to passwords before hashing to prevent rainbow table attacks
C) To shorten the length of the password
D) To decrypt user passwords when they forget them

20. In Prompt Engineering, 'Few-Shot Prompting' refers to:
A) Providing no examples to the model ✗
B) Providing a few examples of the task within the prompt
C) Training the model on a small dataset
D) Reducing the temperature of the model output

21. In Quantum Computing, the ability of a quantum bit (qubit) to exist in multiple states simultaneously is called:
A) Entanglement ✗
B) Superposition
C) Interference
D) Decoherence

22. Which of the following is a characteristic of a Random Forest model?
A) It is a single deep decision tree ✗
B) It uses Bagging to combine multiple decision trees
C) It is prone to high variance
D) It only works for regression tasks

23. In UI/UX design, what does the 'Gestalt Principle of Proximity' suggest?
A) Objects that are close to each other are perceived as a group ✓
B) Bright colors attract more attention
C) Users read from left to right
D) Simple shapes are better than complex ones

24. In Statistical Analysis, what is a Type I Error?
A) Failing to reject a false null hypothesis ✗
B) Rejecting a true null hypothesis
C) Using the wrong statistical test
D) Having too small of a sample size

25. In Flask, which decorator is used to define the URL route for a specific function?
A) @app.route() ✓
B) @flask.url()
C) @app.path()

D) @route.app()

FINAL SCORE: 3/25
Percentage: 12.0%
